PERSONAL STATEMENT

I am a 20-year-old student from Europe, Belarus. I work in two areas: web development and digital art. I started my activity in web development by creating websites. After that, I learned the Javascript programming language. Based on this language and various frameworks, I create web applications. Now I continue to actively study new technologies, in particular the server part of development. I also like to create the UI design for my applications myself. In my free time as a hobby I create photo manipulations with images using Photoshop.

EDUCATION

2019 - 2023
Brest State Technical University
Specialty - Industrial electronics

HOBBIES

Cycling

Cycling is the best way to walk around the city after an intense working day. I ride a fixed-gear bike that I built myself.

Home Workout

Sports, as I believe, should be in everyone's daily schedule. Moreover, it is not necessary to buy a subscription to a fancy gym, but it is enough to perform basic exercises that do not require sports equipment.

Books

Reading books is something I have come to recently. As a child, I rarely picked up anything other than school textbooks. Now I have discovered a really huge benefit from books. Unlike Google or YouTube, books contain more reliable information and which gives a complete picture of a particular topic, and not superficially as it happens on the web.

MAIN SKILLS

JavaScript

The main programming language. It has a huge community that brings more and more new technologies to the language every year.
It is easy to learn and can be run on almost any device.

HTML/CSS

Basic things for web development. Together, HTML, CSS and JS give complete freedom in the creative creation of user applications, and are also the basis for studying various libraries and frameworks.

React JS

The main tool for creating applications. One of the most popular frameworks for JS. It has a rich environment, a large community base and is promoted by Facebook.

Node.JS

Main stuff for making server side of applications.
Also it allows JavaScript go beyond browser.

Adobe Photoshop

Best software for creating design layouts for apps and manipulations with photos.

KEEP LEARNING

I don't stop there. I have studied, I am studying and I will continue to learn new and new things.

Now I am actively engaged in backend development in order to be able to create full-scale applications on my own. I chose the Node platform as the basis for the server part.js, which is based on the same Javascript. Then I plan to do the same server part, but in Python.

As for digital art, I'm not going to stop here either. My plans are to master the basic skills of 3D modeling in order to be able to independently create the necessary stuff.
